When the entry recommendation is the same as the CME close, enter at the Globex open or at the market when you get the report.

All prices on a FUTURES BASIS, nearest contract. We try to make the "Close" the Chicago pit session Settlement price.

- Current Position is long, short, or square (square means NO POSITION). Bold, italic points to new position today.
- Stop is the recommended level to exit the current long or short position. If stop = close, execute as soon as possible.
- Reenter is the recommended level to reenter in the Swing Direction. "NPR" means "no position recommended."

If we carry a position from one day to another day, we change the stop and target to reflect changed conditions. Be sure to cancel the old stop and target.

- Entry Price is the price at which we initiated the current long, short or square position. Entry Date is the date on which the current position was entered.

MTM (mark-to-market) is the number of points gained or lost between the current long or short position entry price and today's close.

* Current position profit target is the recommended level to exit for a gain. If we have no position, we also have no profit target.
