This report recommends trading positions to be taken at the earliest opportunity, normally the Globex open 2 hours after the Chicago pit session close. If you are trading in the spot market, do not wait--place orders as soon as possible after receiving the report. To create spot-equivalent stops and targets, apply the points (in gray) to your entry. If the entry is not the same as the close, you can calculate spot equivalents at www.cmegroup.com.

When the entry recommendation is the same as the CME close, enter at the Globex open or at the market when you get the report.

All prices on a FUTURES BASIS, nearest contract. We try to make the "Close" the Chicago pit session Settlement price.

- Current Position is long, short, or square (square means NO POSITION, also called "flat" or "neutral"). Bold, italic points to new position today.
 - Stop is the recommended level to exit the current long or short position. If stop = close, execute as soon as possible.
 - Reenter is the recommended level to reenter in the Swing Direction. "NPR" means "no position recommended."
- If we carry a position from one day to another day, we change the stop and target to reflect changed conditions. Be sure to cancel the old stop and target.
- Entry Price is the price at which we initiated the current long, short or square position. Entry Date is the date on which the current position was entered.
- MTM (mark-to-market) is the number of points gained or lost between the current long or short position entry price and today's close.

* Current position profit target is the recommended level to exit for a gain. If we have no position, we also have no profit target.
